● ABOUT ME

While my primary focus is mobile development, I also take an active role in modern web architectures and back-end processes. By combining AI integrations with serverless infrastructure, I deliver end-to-end solutions that cover not just the front end but the system as a whole. The architectural decisions and technical details of the projects I build following clean code principles can be reviewed via the GitHub link above.

● PROJECTS

GeoTrack - Real-Time Field Operations & Routing Engine Technology: Flutter, Riverpod, OpenStreetMap (OSRM & Nominatim), Geolocator, REST API

Architectural Design: Targeting a scalable infrastructure for the real-time tracking of field operations (vehicles and personnel), I structured complex map states such as navigation, search and route rendering in a modular and testable way using an MVVM architecture with Riverpod.

Cost-Effective Solution: To eliminate the dependency on Google Maps, I developed a custom map layer that integrates dynamic route calculation via the OSRM API and address resolution (geocoding) via Nominatim.

Performance & UX: I optimised Geolocator streams to deliver battery-friendly, uninterrupted live location tracking, and turned the real-time data flow on the map into a smooth user experience with flutter_map_animations.

GymAI - Generative AI Personal Trainer & Facility Intelligence Technology: Flutter, Google Gemini API, Firebase (Auth, Firestore), QR Code

Generative AI Pipeline: Rather than relying on static workout templates, I built a dynamic prompt engineering structure powered by the **Google Gemini API** that analyses each user's biometrics and goals, creating an engine that generates hyper-personalised exercise programmes which are continuously optimised over time.

Phygital (Physical + Digital) Experience: Using a **QR code architecture** integrated into gym equipment, I enabled users to access instant how-to videos directly at the machine and to digitise their set and repetition data, reducing the operational workload on trainers.

Capacity Optimisation: To manage gym occupancy and prevent overcrowding, I designed a real-time booking and capacity management system running on **Firestore**.

Bio-Astral Intelligence Ecosystem Technology: Flutter, Node.js (TypeScript), Docker, HealthKit/Google Fit, Swiss Ephemeris, Riverpod

Hybrid System Architecture: By moving computationally intensive astronomical calculations (Swiss Ephemeris) into a Dockerised microservice running on Node.js, I reduced the mobile application's performance load by 40%.

Unified Data Layer: By abstracting the HealthKit and Google Fit APIs behind a single interface following Clean Architecture principles (Repository Pattern), I ensured that biometric data from different sources (heart rate, sleep, activity) is processed in a standardised and consistent way.

Scalable Media Streaming & Sync Engine (Karaoke App) Technology: Next.js, TypeScript, Cloudflare R2, Web Audio API, Docker, Rate Limiting

Cloud-Native Media Architecture: By serving bandwidth-intensive audio and media files through a **Cloudflare R2** (S3-compatible object storage) integration, I built an infrastructure that lowers traditional server costs and delivers low-latency content globally.

Custom Synchronisation Engine: Instead of using off-the-shelf libraries, I developed a custom parser for raw LRC files and a React-based synchronisation engine (LyricsFlow), achieving millisecond-accurate audio-to-text alignment despite network latency.

Security & Resilience: I implemented custom API protections and **rate limiting** mechanisms at the application layer, safeguarding the service against potential DDoS attacks and abuse.

NotifyX - Enterprise Communication & Hybrid Document Gateway Technology: Flutter, Firebase (FCM, Auth, Functions), WebView Bridge, Riverpod

Hybrid Mobile Architecture: Rather than rewriting complex file management and upload processes natively from scratch, I connected them to the existing web infrastructure through a secure **WebView Bridge** mechanism.

Serverless Notification Pipeline: To minimise client-side processing load, I moved the notification logic to microservices running on

Firestore Cloud Functions, building a scalable backend architecture that delivers instant, reliable, role-based (Admin/Customer) push notifications to thousands of users.

Role-Based Security Pattern: To manage multiple user types within a single codebase, I developed a token-based, secure authentication layer abstracted through the Repository Design Pattern.

● WORK EXPERIENCE

13/02/2026 - CURRENT - DENİZLİ, TÜRKİYE

SOFTWARE CONSULTANTFEEDBACK YEM VE HAYVANCILIK YÖNETİM SİSTEMLERİ SAN. TIC. LTD. STİ.

- Managed the implementation, technical consultancy and user training processes of the Bestmix feed formulation software end to end.
- Led integration processes that migrated clients' Excel-based databases and historical data into a SQL-based environment while preserving data integrity.
- Developed software solutions fully integrated with NIR devices and ERP systems.
- Designed software systems that leverage AI tools (such as Claude) to automate time-consuming workflows and increase process efficiency.
- Contributed to significant improvements in clients' production performance through the training and consultancy services I provided.
- Gained professional English communication skills in an international business environment through regular contact with clients in Türkiye and the Middle East.
- Developed sector-specific expertise by analysing nutrients and raw materials particular to the animal feed industry.
- Attended industry training programmes such as USSEC's "Full-Fat Soybean Production, Quality Control and Use in Feeding".

10/07/2024 - 10/09/2024 - DENİZLİ, TÜRKİYE

FRONT-END WEB DEVELOPER INTERNKAZK YAZILIM A.Ş.

- Built responsive, performance-focused interfaces compatible with all devices.
- Wrote optimised, maintainable code using HTML, CSS and JavaScript.
- Applied performance optimisation to improve page load speed.
- Collaborated with UI/UX teams to develop user-friendly interfaces.

10/07/2023 - 24/08/2023 - DENİZLİ, TÜRKİYE

INFORMATION TECHNOLOGY INTERNAYSU TEKSTİL A.Ş.

- Monitored stock, order, production and sales processes through the ERP system.
- Created transactions and updated records in the ERP in response to user requests.
- Observed and supported the resolution of technical support requests received by the IT department.
- Supported the addition of new user accounts and the authorisation processes within the ERP system.

● SKILLS

Dart | Flutter | TypeScript | React.js | Next.js | Tailwind CSS | JavaScript | Node.js | SQL | Firebase | Git | Docker | Postman

● EDUCATION & TRAINING

21/09/2021 - 11/06/2025 - DENİZLİ, TÜRKİYE

YÖNETİM BİLİŞİM SİSTEMLERİ- PAMUKKALE ÜNİVERSİTESİ

● LANGUAGE SKILLS

Other language(s): **İNGİLİZCE - B1 (AYDIN LISAN DİL KURSU)**

● SERTİFİKALAR

English Certificate - B1 (Aydın Lisan Dil Kursu)

Flutter ile Uygulama Geliştirin (Google)

Akbank Gençlik Akademisi Teknoloji Okuryazarlığı Programı (Patika.dev)

PHP ile Programlama (YETGİM)

Versiyon Kontrolleri: Git ve GitHub (BTK Akademi)

Siber Güvenlik 101 (Akbank Gençlik Akademisi)
